ABOUT ME

Spirited Full stack developer with experience producing a wide range of web applications and an inexhaustible flame to improve craft. Seeking a Full Time Summer 2020 Internship to increase intelligence and proficiency in the full spectrum of software development.

EXPERIENCE

Freelance Web Developer

October 2019 - PRESENT

- Convert PSDs to repsonsive web pages and Html emails for clients.
- Formulate clean, modular code using best practices such as the Dry Principle and asynchronous programming patterns
- Communicate efficiently with clients to ensure quality application that meets client requirements.

Vugo | Real estate company website for those in search for a new home.

- Built a modern, responsive and attractive presentation from scratch with Html5 , Css3,and Bootstrap4 supplying users with clean user experience.
- Implemented Home listing and Agent filtering capabilities with Custom made AngularJS filters and two way data binding.
- Utilized AngularJs factory and $http service to retrieve Json home listing objects and ng-repeat directive to render listings in view.
- Created robust and reusable application components with AngularJs custom directives preventing redundant,convoluted code.

Skyrail | Ecommerce Website

- Constructed stored procedures in Sql Server which allowed fast Sql query execution and protection from Sql injection attacks.
- Designed scalable relational database via Microsoft Sql Server that enabled ease of data storage and retrieval for user and product data.
- Wrote Server-side scripts to create login and authentication system which established network security and personalized user experiences.
