SUMMARY

Dynamic and spirited developer with a proven record of building relationships and producing a wide range of web applications from concept to completion. Skilled in taking initiative, demonstrating exceptional communication skills, time management and working independently. Energetic and passionate architect with an inexhaustible flame to improve craft and develop optimal solutions that will advance operational, strategic, and tactical organizational goals.

EXPERIENCE

Freelance Web Developer
October 2019 - PRESENT

- Convert mock ups to responsive web pages and Html emails for clients bringing extraordinary ideas to stunning realities.
- Formulate clean, modular code using best practices such as the Dry Principle and asynchronous programming patterns to optimize application performance.
- Communicate efficiently with clients to ensure quality application that meets client requirements.

Vugo | Real Estate Company Website

- Built a modern, responsive and attractive presentation from scratch with Html5 , Css3,and Bootstrap4 supplying users with clean user experience.
- Implemented Home listing and Agent filtering capabilities with Custom made AngularJS filters and two way data binding.
- Utilized AngularJs factory and $http service to retrieve Json home listing objects and ng-repeat directive to render listings in view.
- Created robust and reusable application components with AngularJs custom directives preventing redundant,convoluted code.

Skyrail | Ecommerce Website

- Constructed stored procedures in Sql Server which allowed fast Sql query execution and protection from Sql injection attacks.
- Designed scalable relational database via Microsoft Sql Server that enabled ease of data storage and retrieval for user and product data.
- Wrote Server-side scripts to create login and authentication system which established network security and personalized user experiences.
